

EKOS

SILA STILS came up with the EKOS concept to cover the always increasing demand for small and eco-friendly country houses. EKOS was designed to cover the needs of the modern Northern European to escape the city buzz seeking a stylish trendy and smart, alternative weekend refuge. This 33m² compact house comes as the newer and smaller sibling of SIDUS. With EKOS, Sila Stils has taken energy-saving and sustainability a step further. Despite the house's small size, the living room has an impressive 4.5 meters height at its highest point.

What is even more impressive is that EKOS can be built within 1-2 days as it's prefabricated and two trucks will transport it to its final location. EKOS splits into two floors: the ground floor includes the entrance space, the living room with a fully equipped kitchen, a bedroom, and a full bathroom, while the top floor hosts a double bedroom. The open space top floor merges with the living room and kitchen area and adds character to the interiors. There's even a slightly smaller version of 30m² where the ground floor bedroom serves as a terraced space.
